PROFILE

Data engineer with 5+ years of experience building data platforms that business teams can trust, that adapt as the business changes, and that stay lean on cost. At Syno International, owns the AWS pipelines behind multi-market client reporting: made them adapt to new brands and markets without code releases, replaced manual data loading with automated pipelines, and added quality checks that stop bad data before it reaches decision-makers. Works across Python, SQL, dbt, Terraform, Databricks and workflow orchestration.

TECHNICAL SKILLS

Languages: Python, SQL, PySpark, Bash

Modelling & Transformation: dbt, Data modelling (dimensional modelling, Bronze/Silver/Gold), KPI design, Delta Lake

Orchestration: Step Functions, EventBridge Scheduler, Lakeflow Jobs, ECS Fargate

Cloud & Warehouse: AWS (Glue, Athena, S3, Lambda, IAM, Secrets Manager, CloudWatch, SNS), Databricks, Unity Catalog

IaC & CI/CD: Terraform, Docker, GitHub Actions, OIDC, pytest, Ruff, Git

Databases & BI: MySQL, MS SQL Server, PostgreSQL, MongoDB, Power BI, DAX

WORK EXPERIENCE

Data Scientist (Data Engineering focus) | Syno International, Vilnius, Lithuania *Jul 2025 – Present*

- **Made client reporting adapt to new brands and markets** through configuration instead of code releases, using version-controlled reference data managed with Terraform.
- **Enabled business stakeholders to explore performance across markets on their own** by designing the data model behind a multi-market Power BI report.
- **Increased trust in client-facing numbers** by aligning KPI definitions with the agreed research methodology, so brands and markets compare like for like.
- **Protected decision-makers from wrong numbers** by building pipelines that stop and alert on missing or incomplete data instead of publishing it.
- **Made scheduled reporting more reliable** by orchestrating dependent jobs with Step Functions, so reports refresh only when all upstream data has arrived.
- **Freed the team from manual data loading** by automating ingestion for a research product into a scheduled, monitored pipeline on AWS.
- **Gave analysts one place to work** by bringing data from APIs, databases and third-party file feeds into a single AWS platform.
- **Kept infrastructure spend low** by choosing fit-for-purpose architecture, avoiding about $350+/month in orchestration cost on a daily workload.
- **Reduced security risk** by moving database credentials into Secrets Manager and enforcing least-privilege access across pipelines.

Data Analyst | Syno International, Vilnius, Lithuania *Sep 2024 – Jun 2025*

- **Improved the precision of clients' pricing strategies by 15-20%** using MaxDiff and Van Westendorp.
- **Delivered insights to decision-makers at 95%+ data accuracy** with performance-tuned SQL for brand and campaign models.
- **Gave reporting a single, consistent source of survey data** by consolidating it into one database with Python and SQL pipelines.
- **Built Power BI dashboards with stakeholders** so global clients could track brand performance.

Technical Writer (Data Science) | DataCamp, Remote *Apr 2024 – Jul 2025*

- **Explained technical topics in plain language** for learners worldwide across 18+ peer-reviewed tutorials on Python, SQL and data engineering.

Data Science Instructor | GOMYCODE, Lagos, Nigeria *Aug 2023 – Feb 2024*

- **Prepared 40+ students for data roles** by teaching Python, SQL, data analysis and machine learning through hands-on projects, and coaching them to present their results to non-technical audiences.

Business Intelligence Specialist / Data Scientist | Freelance, Remote *Nov 2020 – Aug 2024*

- **Reduced clients' manual reporting effort in energy and edtech** by automating their data flows with SSIS and SQL.
- **Gave client teams a clear view of their KPIs and operations** with Power BI dashboards.

SELECTED PROJECTS

Retail Customer Intelligence (dbt on Databricks) | *retail-customer-intelligence* · *2026*

- **Built customer analytics in dbt** with automated tests that catch inconsistent records before they reach reports, plus incremental loading and history tracking.
- **Made model changes safe to ship** with CI/CD that promotes dbt releases from staging to production on Databricks.

Energy Analytics Platform (AWS batch pipeline on real grid data) | *energy-analytics-platform* · *2026*

- **Turned messy real-world utility records** into a reliable AWS analytics pipeline that flags bad data for review instead of silently dropping it.

Shared Databricks utilities | *shared-databricks-utils* · *2026*

- **Cut duplicated code across data jobs** with a shared, tested Python library for logging, configuration, schema checks and retries.

EDUCATION

Turing College, Micro Masters, Data Analysis & AI Ethics | Remote, Lithuania | 2024 – 2025

University of Ibadan, BSc. Mechanical Engineering | Ibadan, Nigeria | 2016 – 2023

Udacity, Nanodegree, Data Analysis | Remote | 2022

CERTIFICATIONS & PUBLICATIONS

- The Rise of the AI Data Engineer Boot Camp, DataExpert.io (Zach Wilson): Databricks, Lakebase, agentic data apps (2026)
- Microsoft Certified: Power BI Data Analyst Associate (2023, expired)
- Co-author, "Optimization of energy grid efficiency with machine learning: A comprehensive review of challenges and opportunities", Renewable and Sustainable Energy Reviews (Elsevier), vol. 223, 2025
